READING 1 (Items 1-5)

(5 marks)

Read the texts. Are the statements which follow each text **True** or **False**?
For each item, shade in the bubble under the correct option.

1. Last year , my grandfather suffered from dizziness . He went to the hospital and had a treatment which he rejected to take . However , he got better soon and did not need to visit the hospital again.

Statement

True	False
------	-------

The writer`s grandfather took the medicine and got better.

2. My teen daughter is moody . She usually refuses to discuss her problems with me .She always claims that I am critical and suspicious . Even when she started smoking , I was the last person to know about that .Surprisingly , none of her friends smoke.

Statement

True	False
------	-------

The daughter is the only smoker among her friends.

3. Unlike all my family members , I cannot stand watching horror movies . I would rather watch a comic than one of these movies . They think that these movies help them face dangers in life .I do not agree with them . On the contrary , they may cause misbehavior.

Statement

True	False
------	-------

The writer enjoys comic movies than scary ones.

READING 1 (continued)

4. In a recent study , scientists found out that taking a lot of caffeine is harmful to you .
It hinders your sleep time . You cannot sleep well .Some people think that it helps you
Achieve your work well . But there is no evidence for that.

Statement

True	False
------	-------

It has been proved that caffeine helps you in work.

5. Rome was the best tourist destination I have been to .Although , I visited many cities ,
but still it is my favourite. The most fabulous landscape in this city is the ancient
temple which I visited twice.

Statement

True	False
------	-------

The writer visited the temple two times.

READING 2 (Items 6-12)**(7 marks)**

Read the text and complete the task. Then, for each item, shade in the bubble next to the correct option.

Three billion people, around 40% of the world's population, use online social media and we're spending an average of two hours every day sharing, liking, tweeting and updating on these platforms, according to some reports. That breaks down to around half a million tweets and Snapchat photos shared every minute.

With social media playing such a big part in our lives, could we be sacrificing our mental health and well-being as well as our time? What does the evidence actually suggest?

Since social media is relatively new to us, conclusive findings are limited. The research that does exist mainly relies on self-reporting, which can often be flawed, and the majority of studies focus on Facebook. That said, this is a fast-growing area of research, and clues are beginning to emerge. BBC Future reviewed the findings of some of the science so far:

People use social media to vent about everything from customer service to politics, but the main drawback of this is that our feeds often causes an endless stream of stress.

In 2015, researchers at the Pew Research Center based in Washington DC sought to find out if social media induces more stress than it relieves

In the survey of 1,800 people, women reported being more stressed than men. Twitter was found to be a "significant contributor" because it increased their awareness of other people's stress

But Twitter also acted as a coping mechanism – and the more women used it, the less stressed they were. The same effect wasn't found for men, whom the researchers said had a more distant relationship with social media. Overall, the researchers concluded that social media use was linked to “modestly lower levels” of stress.

In 2014, researchers in Austria found that participants reported lower moods after using Facebook for 20 minutes compared to those who just browsed the internet. The study suggested that people felt that way because they saw it as a waste of time

A good or bad mood may also spread between people on social media, according to researchers from the University of California, who assessed the emotional content of over a billion status updates from more than 100 million Facebook users between 2009 and 2012

Bad weather increased the number of negative posts by 1%, and the researchers found that one negative post by someone in a rainy city influenced another 1.3 negative posts by friends living in dry cities. The better news is that happy posts had a stronger influence; each one inspired 1.75 more happy posts. Whether a happy post translates to a genuine boost in mood, however, remains unclear.

6. According to the text , about Posts sent dially .

50,000

5000,000

500,000

6. In average , people spent about minutes using social networking sites.

One hundred

One hundred and twenty

Two hundred

Reading 2 ,continued

8. According to the writer , there are evidences on social media effects

- strong average weak

9.the writer thinks that people uses social media for

- different purposes trade purposes Entertainment only

10.From the results of researches mentioned in the text , we can say that social media causes stress for....

- men more than women women not men women more men

11. In Austria , participants who used facebook for more than a quarter of an hour Reported

- good mood bad mood exciting mood

12. Good news posts has effect on people .

- good bad no

READING 3 (Items 13-20)**(8 marks)**

Read the text. Then complete the tasks.

Some people are driven by curiosity. They love to ask questions. They want to understand how everything works. This is the case with Dr. Mae Jemison. Ever since she was young, she always had the mind of a scientist. Mae was born in the year 1985 in Decatur, Alabama. Her family moved to Chicago, Illinois a few years later. That way, she and her siblings got a better education. Her father was a roofer and a carpenter. Her mother was a school teacher. Both her parents encouraged their children to keep learning and follow their passion. Mae's mother even helped turn everyday events into science experiments. When Mae was young, a splinter infected her thumb. She observed pus oozing out. She was curious about this white stuff: what was it and why was it coming out? That simple incident turned into a learning experience. She ended up doing a whole project about pus. It's no surprise that Mae did well at school. Her curiosity and drive were natural. She graduated from high school with honors. Then she received a Bachelor of Science degree in chemical engineering. She got another degree in African and Afro-American Studies. The first was from Stanford University as a scholarship. But Mae didn't want to study or do just one thing. She wanted to explore many things. She chose to study medicine next at Cornell University Medical College. Then she officially became a doctor. In 2021, she joined the Peace Corps and went to West Africa. She was a medical officer in Sierra Leone and Liberia for over two years. That was a great adventure. After this, Mae moved to Los Angeles and worked as a doctor. She enjoyed her job yet her childhood dream of going to space still lingered. She applied for admission to NASA's astronaut training program. NASA stands for National Aeronautics and Space Administration. Believe it or not, she didn't get in. The Challenger disaster delayed everything. But she didn't give up. She applied again a year later. And this time, she was accepted! She was admitted into the NASA astronaut training program. Over people had applied in total. She was chosen along with fifteen other

candidates. And in 2012, her dream came true. She became the first African-American woman to go to space. She was joined by six other astronauts aboard the spaceship Endeavour. The crew remained in space for a total of eight days. Their mission was called STS. Mae conducted experiments on weightlessness and motion sickness on the crew and herself.

READING 3 (continued)

Task One: For each item, write a short answer (**not more than FOUR WORDS**).

13. What is Mae's father profession? _____.
14. During her childhood, what incident happened to Mae's? _____.
15. How did the pus inspired Mea? _____.
16. What was her dream? _____.

Task 2: For each item, shade in the bubble next to the correct option.

17. Mai's experiment was mainly done on
- Only animals Both animals and people Only people
18. She applied for NASA
- twice once Three times
19. She did the experiment to
- explore space earn more money Learn about a sickness
20. She travelled to Africa
- As a part of her job For entertainment To have a treatment
